Summary

Software engineer with 2+ years at Airbus shipping safety-critical, regulated software end to end across React/TypeScript, Django, Spring Boot, Kafka and AWS. Sole owner of a 10,000+ page document authoring platform; Airbus Spot Award for delivering its POC two weeks early.

Experience

Airbus India Private Limited Aug 2024 – Present
Software Engineer, Full Stack *Bengaluru, India*

- Delivered a Word-like authoring platform for regulated aircraft safety documentation that handles **10,000+ page** documents with track changes and multi-user collaboration, as **sole engineer** owning design through release on Froala (frontend) and Aspose.Words (backend)
- Earned the **Airbus Spot Award** and stakeholder approval for full development by shipping the editor proof of concept **two weeks ahead of plan**
- Enabled airline operations teams to identify flight-risk patterns by building full-stack features for a mission-critical aircraft safety analytics platform using React, TypeScript and Django REST Framework
- Supported real-time decision-making on high-volume flight-safety data by optimizing SQL queries and moving heavy processing to asynchronous jobs, in backend services built on Hexagonal Architecture for isolated testing
- Protected **6 business-critical workflows** from release regressions by building a Cypress end-to-end test suite; reviewed peer pull requests and refined requirements with product, data and operations teams

Airbus India Private Limited Jan 2024 – Jul 2024
Software Engineer Intern, Full Stack *Bengaluru, India*

- Accelerated aircraft manual reviews by **5x** by building and deploying a document review platform that replaced manual, multi-stage verification; the tool was later adopted for safety analysis
- Secured review APIs across multiple user roles by designing role-domain mappings and enforcing JWT authentication and rate limiting through AWS API Gateway, on an event-driven Spring Boot, PostgreSQL and Kafka backend
- Reduced frontend API calls by **50%** by restructuring Redux state management in a React app with role-based dashboards and real-time review workflows

Projects

E-Commerce Microservices Platform | *Spring Boot, Microservices, Docker, JWT* GitHub

- Built a backend of **3 independently deployable services** (product, order, inventory) secured with JWT authentication and containerized with Docker, so each service can scale and ship on its own

AI Research Assistant (Chrome Extension) | *Spring Boot, React, Google Gemini API* GitHub

- Cut the time needed to extract key points from any web page to a single click by building a Chrome extension backed by a Spring Boot service that calls the Gemini API for real-time summaries

Technical Skills

Languages: Java, Python, TypeScript, JavaScript, SQL, C++
Frontend: React, Redux, Next.js, Tailwind CSS, Froala Editor
Backend: Spring Boot, Django REST Framework, REST APIs, Microservices, Kafka, Hexagonal Architecture, Aspose.Words
Databases: PostgreSQL, MySQL, MongoDB, Neo4j
Cloud & DevOps: AWS (API Gateway), Docker, Kubernetes, CI/CD, Git
Testing & Tools: Cypress, Postman, Agile/Scrum, Claude Code, Cursor, Gemini API

Achievements

Airbus Spot Award (Q3 2026): Recognized for delivering the document editor POC two weeks ahead of plan, which secured approval for full development
LeetCode: Solved 400+ data structures and algorithms problems
Production Ownership: Converted from intern to full-time engineer at Airbus; the review platform built as an intern is now also used for safety analysis

Education

Punjab Engineering College 2020 – 2024
B.Tech in Electrical Engineering *Chandigarh, India*
